The main map displays a detailed sewerage network layout for the commune of Etassisin La Sauvign. The network is overlaid on a cadastral map showing property boundaries and buildings. The layout includes several types of infrastructure:

- Assainissement collectif (Collective Sewerage):** Indicated by pink hatched areas, primarily following the main roads and central parts of the village.
- Assainissement non collectif (Non-collective Sewerage):** Indicated by white areas, typically in more rural or peripheral zones.
- Branchements EU (EU Branches):** Shown as blue lines connecting individual properties to the main network.
- Pluvial (Pluvial):** Shown as red lines, likely representing stormwater collection and management.
- Eaux usées séparatifs (Separate Wastewater):** Shown as green lines, indicating separate collection for wastewater.
- Refoulement EU (EU Pumping):** Shown as purple lines, indicating areas where wastewater is pumped.
- Unitaire (Unitary):** Shown as yellow lines, representing a combined sewer system.

 The map also shows existing infrastructure like roads and buildings in grey. A north arrow is located in the top left corner.

This inset map provides a regional context for the commune of Etassisin La Sauvign. It shows the commune's location within a larger administrative area, with the commune's boundary highlighted in pink to match the main map. The inset map shows a network of roads and the relative positions of neighboring communes, helping to understand the commune's geographical setting within the region.
